Machine learning in material design.[***APCOM2019***] *02/2019 - 06/2020*

- Applied various generative adversarial networks(GANs) to generate high fedility material samples.
- Proposed a method using VGG networks that can predict mechanical properties from microstructure images with 95% accuracy.
- Investigated an integrated model that optimizes the geometry generated by GANs.

Constructing auxetic materials unsing computational molecular dynamics.

- Prunned auxetic networks to generate material with negtive poisson's ratio based on "**Auxetic metamaterials from disordered networks**".
- Proposed a model that dealt with 96-core processors, incresed the computatioinal efficiency by 40 times.
